**Dr. Mohamed El Darieby**

Faculty of Engineering and Applied Sciences  
Ontario Tech University, Oshawa, Canada

Dear Dr. Mohamed El Darieby

As a passionate fourth-year software engineering student I am excited and thrilled to see a job opening at Ontario Tech University. I am looking forward to working with new technologies and I am confident I will be a great fit for your team. I have gained knowledge and experience through my time at Ontario Tech University relating to software design, software architecture, microprocessors and various programming languages.

I have worked at DCR System Group Inc where I was able to gain professional experience. I was promoted from IT Technician to IT analyst based on my hard-working attribute and skillset. As an IT Technician, I was in charge of auditing the company assets while escalating them to a higher level. As an IT Analyst, I oversaw a team to manage the company's program from failure and communicated with the vendors to resolve concerns/issues that occurred. I helped develop applications with a software engineer to help the company with efficiency and productivity as the company was using outdated software such as excel to monitor their database.

I have worked on various projects where I have gained leadership and great communication skills at Ontario Tech University. I am organized, have great problem-solving skills and manage my time accordingly to meet strict deadlines while always looking to make improvements to maximize efficiency and quality of work.

I have worked with multiple programming languages such as **C**, **C++**, **Java**, and **python**. I have applied machine algorithms such as **K-means** clustering to group data that has been gathered and have done **web scraping** while cleaning the data and storing the required data in a **panda dataset**. I have worked with web applications and maintained them with **HTML**, **CSS**, **MySQL**, and **PHP**.

I am confident that I have attained the required qualifications for this position with my technical and communication skills. I look forward to discussing my skills and what I can bring to your team.

Sincerely,

**Abdul Bhutta**
